The Process of Aging | Introduction to Sociology

The aging process is influenced by the social, economic, and age structures of a society, and also by social, political, and economic changes within a given culture. These factors influence both individual and population

Aging as a Social Process - Oxford University Press

Aging as a Social Construction. While aging itself is a biological process, what it means to be "young" or "old" is socially constructed. This means that there is no inherent cultural meaning to the biological process of aging. Rather, cultures imbue youth and age with meanings. Aging is perceived differently around the world, demonstrating its social construction.

A Global Perspective on Aging | Boundless Sociology

Today, most scientists think that aging is caused by a complex interplay of different factors, including genetics, programmed physiological changes to our cells, and behavioral and environmental influences. Much of this process is unavoidable. In a sense, our cells are "coded" to die off as time passes. For example, consider the role of telomeres.

Aging as a Social Process: Canadian Perspectives. - Free ...

Aging is one of the important social issues that society should be concerned about. Aging refers to the gradual changes that happen with time in the life of an individual (Kaplan, 2006, p. 196). A multifaceted process involves changes in terms of psychological, physical, and social changes.

Aging as a Social Process - 978 Words | Report Example

Although social aging can differ from one individual to another, it is also profoundly influenced by the perception of aging that is part of a society's culture. If a society views aging positively, the social aging experienced by individuals in that society will be more positive and enjoyable than in a society that views aging negatively.

Looking beyond biology to explore the complex social process of aging, this fully updated sixth edition draws on a wide variety of theoretical and methodological perspectives to reveal the individual and societal dimensions of aging in Canada.

Aging as a Social Process: Canadian Perspectives is a synthesis and interpretation of social science research and census data concerning individual and population aging. Throughout, the emphasis is on identifying, describing, and explaining patterns, processes, and current issues associated with individual population aging, rather than on describing programs or providing prescriptions to assist older persons. This approach enables students and practitioners to acquire basic knowledge about older adults and to develop an understanding of aging processes that people may experience throughout the life course.

The most comprehensive study of the sociology of aging, featuring coverage of the latest issues in the field, recent research and data, and real-world examples from Canada and around the globe Looking beyond biology to explore the complex social process of aging, this text draws on a wide variety of theoretical and methodological perspectives to reveal the individual and societal dimensions of aging in Canada.

This edition details the impact of societal forces on the aging process. Fully reorganized with the addition of new materials, the book focuses on the diversity of the older population, examining it from macro/micro perspectives to understand aging and the life course as a social phenomenon.--[book cover]

The aging of the population of the United States is occurring at a time of major economic and social changes. These economic changes include consideration of increases in the age of eligibility for Social Security and Medicare and possible changes in benefit levels. Furthermore, changes in the social context in which older individuals and families function may well affect the nature of key social relationships and institutions that define the environment for older persons. Sociology offers a knowledge base, a number of useful analytic approaches and tools, and unique theoretical perspectives that can facilitate understanding of these demographic, economic, and social changes and, to the extent possible, their causes, consequences and implications. The Future of the Sociology of Aging: An Agenda for Action evaluates the recent contributions of social demography, social epidemiology and sociology to the study of aging and identifies promising new research directions in these sub-fields. Included in this study are nine papers prepared by experts in sociology, demography, social genomics, public health, and other fields, that highlight the broad array of tools and perspectives that

can provide the basis for further advancing the understanding of aging processes in ways that can inform policy. This report discusses the role of sociology in what is a wide-ranging and diverse field of study; a proposed three-dimensional conceptual model for studying social processes in aging over the life cycle; a review of existing databases, data needs and opportunities, primarily in the area of measurement of interhousehold and intergenerational transmission of resources, biomarkers and biosocial interactions; and a summary of roadblocks and bridges to transdisciplinary research that will affect the future directions of the field of sociology of aging.

"Now in its seventh edition, *Aging as a Social Process* continues to show students that human aging is more than just a matter of biology—it is also a complex social process. Drawing on a wide variety of theoretical and methodological perspectives and with a multidisciplinary approach, *Aging as a Social Process* sheds light on the individual and societal dimensions of aging. The seventh edition features data from the 2016 Census, the latest research in the field, and increased coverage of aging and mental health, marginalization, technology, and intersectionality. *Aging as a Social Process* offers students a thoroughly up-to-date and comprehensive introduction to the sociological study of aging in Canada."--

By 2030 there will be about 70 million people in the United States who are older than 64. Approximately 26 percent of these will be racial and ethnic minorities. Overall, the older population will be more diverse and better educated than their earlier cohorts. The range of late-life outcomes is very dramatic with old age being a significantly different experience for financially secure and well-educated people than for poor and uneducated people. The early mission of behavioral science research focused on identifying problems of older adults, such as isolation, caregiving, and dementia. Today, the field of gerontology is more interdisciplinary. *When I'm 64* examines how individual and social behavior play a role in understanding diverse outcomes in old age. It also explores the implications of an aging workforce on the economy. The book recommends that the National Institute on Aging focus its research support in social, personality, and life-span psychology in four areas: motivation and behavioral change; socioemotional influences on decision-making; the influence of social engagement on cognition; and the effects of stereotypes on self and others. *When I'm 64* is a useful resource for policymakers, researchers and medical professionals.

This volume presents a systematic examination of the impact of social structures on individual behaviors and on their development in adulthood and old age. These papers and responses attempt to improve the reciprocal relationship between changes in social macro- and micro-structures and the process of psychological development in relation to issues of human aging. Using and combining concepts and data from various fields, this research promotes a better understanding of the effects of demographic patterns and social structures on the psychological development of adults.
