The Seventh Edition of CHEMISTRY IN FOCUS helps students develop an appreciation for the molecular world that underlies the world we can see. From the first page to the last, Professor Tro emphasizes the connection between the atoms and molecules that compose matter and the properties of that matter. Students learn to see the world through the lens of chemistry, and to find excitement and awe in the myriad of chemical processes occurring all around them all the time. This easy-to-understand text also helps students understand the major scientific, technological and environmental issues affecting our society. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

From the opening example to the closing chapter, the Second Edition Update of CHEMISTRY IN FOCUS maintains a consistent focus on explaining the connections between the macroscopic world (what we can see) and the molecular world (what we cannot see). With multi-part images that feature photographs of everyday objects or processes and magnifications that reveal the molecules and the atoms responsible, the book's "molecular vision" art program is truly unique. In addition, Tro develops students' appreciation for the fundamental role the molecular world plays in our daily lives and an understanding of how major scientific and technological issues affect our society. With coverage of global warming, ozone depletion, acid rain, drugs, consumer products, and even the infant field of nanotechnology, the book is always contemporary, always fascinating. This Update includes CNN Videos free with every new copy of the text and is now paperbound at the same low price.

The main goals of this text are to develop students' appreciation for the molecular world and stress the fundamental role it plays in our daily lives.
