I have used here $n\lambda = d \sin \theta$ but in general we don't use 2 in the diffraction grating formula. In this diffraction grating experiment you will observe a pattern of diffracted light. If you are using then it will be in seven colors. For monochromatic it will be only dark and bright. You can read more from

x 2 h This is the angle of the first order diffraction of red light by the CD acting as a reflection diffraction grating. The tracks on a CD are like the slits on a diffraction grating. Using the angle calculated in Q6 and the wavelength of red light of 6.5×10^{-7} m the separation of the tracks, d , can be calculated.
