In this new Architecture Brief, Ethics for Architects, Thomas Fisher presents fifty case studies representing a broad range of ethical dilemmas facing today's architects, from questions regarding which clients to work for, to the moral imperatives of reclaiming building materials for construction instead of sending them to landfills. This timely book features newly relevant interpretations adapted to the pervasive demands of globalization, sustainability, and developments in information technology. Fisher's analysis of architecture's thorniest ethical issues are written in a style that is accessible to the amateur philosopher and appealing to professional architects and students alike. Thought-provoking and essential, Ethics for Architects is required reading for any designer who wants to work responsibly in today's complex world.

Ethics is one of the most important and least understood aspects of design practice. In his latest book, Thomas Fisher shows how ethics are inherent to the making of architecture - and how architecture offers an unusual and useful way of looking at ethics. The Architecture of Ethics helps students in architecture and other design disciplines to understand the major approaches to ethics and to apply them to the daily challenges they face in their work. The book covers each of the four dominant approaches to ethics: virtue ethics, social contract ethics, duty ethics, and utilitarian ethics. Each chapter examines the dilemmas designers face from the perspective of one of these categories. Written in an accessible, jargon-free style, the text also features 100 illustrations to help integrate these concepts into the design process and to support visual understanding. Ethics is now a required part of accredited architecture programs, making this book essential reading for all students in architecture and design.

From theory to practice a unique, well-rounded guide to ethics fortoday's architect How does an architect assist a community in evaluating alternativesdesigns? Resolve a dispute with a contractor? Take into account aproject's impact on the natural environment? When it comes to questions like these, making decisions about whatought to be done or what is the "best" or "right" solution requiresmore than sound technical knowledge and strong design talent. Itdemands a solid understanding of the ethical issues that lie at theheart of architectural practice. Ethics and the Practice of Architecture offers a complete,broad-based introduction to this crucial subject. First, itexamines basic ethical theories and their application toarchitecture, and discusses different ways of identifying ethicalcontent in architecture. Bridging the gap between theory andpractice, the second part of the book surveys differentprofessional settings and building project processes thatfrequently hold ethical concerns, and charts the ethical mandatesthat arise from them. In the final section of the book, thirty case studies explore awide range of ethical dilemmas encountered in architecturalpractice, with useful guidance on how to work through themeffectively. Arranged by topics that span the key phases of aproject from pre-design through post-occupancy evaluation, thesecase studies allow a detailed look at ethical concerns in real-lifesituations where multiple issues are often at stake. Providing a practical framework for the exploration of ethicalissues in architecture today, Ethics and the Practice ofArchitecture is an excellent resource for present and futurearchitects in all areas of the field.

A cast of leading writers and practitioners tackle the ethical questions that architects are increasingly facing in their work, from practical considerations in construction to the wider social context of buildings, their appearance, use and place in the narrative of the environment. This book gives an account of these ethical questions from the perspectives of historical architectural practice, philosophy, and business, and examines the implications of such dilemmas. Taking the current discussion of ethics in architecture on to a new stage, this volume provides an accumulation of diverse opinions, focusing on architects' actions and products that materially affect the lives of people in all urbanized societies.

Many believe that the moral mission of architecture has been in serious decline for the last 25 years. In this important new book, Tom Spector points out the dilemmas of architectural practice and offers a theoretical and practical basis for an examination and transformation of the quandaries the profession now faces. What makes a good building or a good architect? Are there limits to an architect's ethical or legal responsibilities in a building process where architecture plays an increasingly smaller role? Is preservation a moral imperative? What happens when building codes and ethical responsibilities are in conflict? In The Ethical Architect, Spector investigates the moral underpinnings and implications of leading architectural theories, subjecting them to the analytical techniques of moral philosophy. His conclusions provide a road map to help architects make the right decision in the difficult tradeoffs that confront designers on a daily basis: Spector estimates that more than 100,000 decisions go into the design of an average sized building. The Ethical Architect is a work of theory but refers to real buildings and real-world problems. It is Spector's call-to-arms for his profession and a must-read for practicing architects and students alike.

Philosophy for Architects is an engaging and easy-to-grasp introduction to philosophical questions of interest to students of architectural theory. Topics include Aristotle's theories of "visual imagination" and their relevance to digital design, the problem of optical correction as explored by Plato, Hegel's theory of zeitgeist, and Kant's examinations of space and aesthetics, among others. Focusing primarily on nineteenth- and twentieth-century philosophy, it provides students with a wider perspective concerning philosophical problems that come up in contemporary architectural debates.
