Continue reading the main story. In Arizona, one of the hardest hit states in the nation, 100 teachers protested by calling in sick.

A harrowing chronicle by two leading historians, capturing in real time the events of a year marked by multiple devastations. When we look back at the year 2020, how can we describe what really happened? In *A Deeper Sickness*, award-winning historians Margaret Peacock and Erik Peterson set out to

preserve what they call the “focused confusion,” and to probe deeper into what they consider the Four Pandemics that converged around the 12 astonishing months of 2020: • Disease • Disinformation • Poverty • Violence Drs. Peacock and Peterson use their interdisciplinary expertise to extend their analysis beyond the viral science, and instead into the social, political, and historical dimensions of this crisis. They consulted with dozens of experts and witnesses from a wide range of fields—from leading epidemiologists and health care workers to leaders of the Black Lives Matter movement, district attorneys, political scientists, philosophers, and more. Their journey revealed a sick country that believed it was well, a violent nation that believed it was peaceful; one that mistook poverty for prosperity and accountability for rebellion. Organized into the journal-entries along with dozens of archival images, *A Deeper Sickness* will help readers sift through the chaos and misinformation that characterized those frantic days. It is both an unflinching indictment of a nation that is still reeling and a testament to the power of human resilience and collective memory. Readers can share their story and become a contributing author by visiting an interactive digital museum, where the authors have preserved dozens of more stories and interviews. Visit Margaret Peacock and Erik L. Peterson’s digital museum at [adhc.lib.ua.edu/pandemicbook/](http://adhc.lib.ua.edu/pandemicbook/).

This book contains some 600 entries on a range of topics from ancient Chinese warfare to late 20th-century intervention operations. Designed for a wide variety of users, it encompasses general reviews of aspects of military organization and science, as well as specific wars and conflicts. The book examines naval and air warfare, as well as significant individuals, including commanders, theorists, and war leaders. Each entry includes a listing of additional publications on the topic, accompanied by an article discussing these publications with reference to their particular emphases, strengths, and limitations.

Estimates indicate that as many as 1 in 4 Americans will experience a mental health problem or will misuse alcohol or drugs in their lifetimes. These disorders are among the most highly stigmatized health conditions in the United States, and they remain barriers to full participation in society in areas as basic as education, housing, and employment. Improving the lives of people with mental health and substance abuse disorders has been a priority in the United States for more than 50 years. The Community Mental Health Act of 1963 is considered a major turning point in America's efforts to improve behavioral healthcare. It ushered in an era of optimism and hope and laid the groundwork for the consumer movement and new models of recovery. The consumer movement gave voice to people with mental and substance use disorders and brought their perspectives and experience into national discussions about mental health. However over the same 50-year period, positive change in American public attitudes and beliefs about mental and substance use disorders has lagged behind these advances. Stigma is a complex social phenomenon based on a relationship between an attribute and a stereotype that assigns undesirable labels, qualities, and behaviors to a person with that attribute. Labeled individuals are then socially devalued, which leads to inequality and discrimination. This report contributes to national efforts to understand and change attitudes, beliefs and behaviors that can lead to stigma and discrimination. Changing stigma in a lasting way will require coordinated efforts, which are based on the best possible evidence, supported at the national level with multiyear funding, and planned and implemented by an effective coalition of representative stakeholders. Ending Discrimination Against People with Mental and Substance Use Disorders: The Evidence for Stigma Change explores stigma and discrimination faced by individuals with mental or substance use disorders and recommends effective strategies for reducing stigma and encouraging people to seek treatment and other supportive services. It offers a set of conclusions and recommendations about successful stigma change strategies and the research needed to inform and evaluate these efforts in the United States.
