Legal research: materials and methods.

The Murray and DeSanctis titles are designed for the current generation of law students whose familiarity and comfort with on-line and computer-based learning create a demand for teaching resources that take advantage of that familiarity and comfort level. Legal Research Methods provides a process-based text covering all aspects of first year legal analysis and research. This book focuses on legal research tools and the theory and practice of legal research written from a practitioner's perspective. It discusses planning for research and performing research, and provides criteria for determining when you are finished with your research. It has sample research plans for tight budgets in terms of time or expense, and its process-oriented methodology is designed to maximize research results in the most economical ways. Paired with the book is an electronic, computer-based version of the text that adds links to on-line databases and Internet-based resources and supplements the text with pop-up definitions from Black's Law Dictionary. The electronic version of the text is searchable and highly portable, with internal and external navigation links, making them more valuable for use in class and out. The interactive text employs a layout that departs from the traditional, all-text casebook format through use of callout text boxes, diagrams, and color/border segregated feature sections for hypotheticals, references to scholarly debates, or other useful information for law students.
