Pick's Disease - Common Symptoms and Causes

Frontotemporal dementia is an umbrella term for a group of uncommon brain disorders that primarily affect the frontal and temporal lobes of the brain. These areas of the brain are generally associated with personality, behavior and language. In frontotemporal dementia, portions of these lobes shrink (atrophy). Signs and symptoms vary, depending on which part of the brain is affected.

The only way to confirm the diagnosis of Pick disease is to look at the brain directly and to identify Pick bodies and swollen neurons. This is possible only if the brain is biopsied. This means taking a small sample of brain tissue for testing. This is done by a neurosurgeon, a surgeon who specializes in operating on the brain.

Pain is a distressing feeling often caused by intense or damaging stimuli. The International Association for the Study of Pain's widely used definition defines pain as "An unpleasant sensory and emotional experience associated with, or resembling that associated with, actual or potential tissue damage". In medical diagnosis, pain is regarded as a symptom of an underlying condition.
