According to the last census, one in five people in the United States lives with a disability. Some are visible, some are hidden—but all are underrepresented in media and popular culture. Now, just in time for the thirtieth anniversary of the Americans with Disabilities Act, activist Alice Wong brings together an urgent, galvanizing collection of personal essays by contemporary disabled writers. There is Harriet McBryde Johnson's "Unspeakeable Conversations," which describes her famous debate with Princeton philosopher Peter Singer over her own personhood. There is columnist s. e. smith's celebratory review of a work of theater by disabled performers. There are blog posts, manifestos, eulogies, and testimonies to Congress. Taken together, this anthology gives a glimpse of the vast richness and complexity of the disabled experience, highlighting the passions, talents, and everyday lives of this community. It invites readers to question their own assumptions and understandings. It celebrates and documents disability culture in the now. It looks to the future and past with hope and love.

"La somnolencia diurna excesiva y el insomnio son un problema de salud pública. A partir de la invención y generación de la luz eléctrica, y debido a la revolución industrial, la sociedad occidental ha venido promoviendo la no necesidad de dormir. En este libro, se presentan los aspectos neurobiológicos implicados en el ciclo vigilia/sueño, para que el médico pueda atender un paciente con insomnio o somnolencia diurna excesiva y realizar una adecuada evaluación clínica, y así decidir un diagnóstico etiológico e indicar el tratamiento más conveniente. Esta obra tiene como objetivo ser una guía de tipo académico para estudiantes y profesionales de la salud, con el fin de que conozcan el abordaje actualizado del paciente con estos dos padecimientos. Si un paciente recibe algún beneficio a partir de la lectura que los médicos hagan de este libro, se habrán cumplidos los objetivos trazados por el autor." The definitive resource on the innovative use of DISE for obstructive sleep apnea Obstructive sleep apnea is the most prevalent sleep-related breathing disorder, impacting an estimated 1.36 billion people worldwide. In the past, OSA was almost exclusively treated with Continuous Positive Airway Pressure (CPAP), however, dynamic assessment of upper airway obstruction with Drug-Induced Sleep Endoscopy (DISE) has been instrumental in developing efficacious alternatives. Drug-Induced Sleep Endoscopy: Diagnostic and Therapeutic Applications by Nico de Vries, Ottavio Piccin, Olivier Vanderveken, and Claudio Vicini is the first textbook on DISE written by world-renowned sleep medicine pioneers. Twenty-four chapters feature contributions from an impressive group of multidisciplinary international experts. Foundational chapters encompass indications, contraindications, informed consent, organization and logistics, patient preparation, and drugs used in DISE. Subsequent chapters focus on treatment outcomes, the role of DISE in therapeutic decision making and upper airway stimulation, pediatric sleep endoscopy, craniofacial syndromes, advanced techniques, and more. Key Highlights Comprehensive video library highlights common and rare DISE findings A full spectrum of sleep disordered breathing and OSA topics, from historic to future perspectives Insightful clinical pearls on preventing errors and managing complications including concentric and epiglottis collapse Discussion of controversial DISE applications including oral appliances and positional and combination therapies This unique book is essential reading for otolaryngology residents, fellows, and surgeons. Clinicians in other specialties involved in sleep medicine will also benefit from this reference, including pulmonologists, neurologists, neurophysiologists, maxillofacial surgeons, and anesthesiologists.

Sensor Technologies: Healthcare, Wellness and Environmental Applications explores the key aspects of sensor technologies, covering wired, wireless, and discrete sensors for the specific application domains of healthcare, wellness and environmental sensing. It discusses the social, regulatory, and design considerations specific to these domains. The book provides an application-based approach using real-world examples to illustrate the application of sensor technologies in a practical and experiential manner. The book guides the reader from the formulation of the research question, through the design and validation process, to the deployment and management phase of sensor applications. The processes and examples used in the book are primarily based on research carried out by Intel or joint academic research programs. (Sensor Technologies: Healthcare, Wellness and Environmental Applications provides an extensive overview of sensing technologies and their applications in healthcare, wellness, and environmental monitoring. From sensor hardware to system applications and case studies, this book gives readers an in-depth understanding of the technologies and how they can be applied. I would highly recommend it to students or researchers who are interested in wireless sensing technologies and the associated applications.) Dr. Benny Lo Lecturer, The Hamlyn Centre, Imperial College of London (This timely addition to the literature on sensors covers the broad complexity of sensing, sensor types, and the vast range of existing and emerging applications in a very clearly written and accessible manner. It is particularly good at capturing the exciting possibilities that will occur as sensor networks merge with cloud-based (big data) analytics to provide a host of new applications that will impact directly on the individual in ways we cannot fully predict at present. It really brings this home through the use of carefully chosen case studies that bring the overwhelming concept of 'big data' down to the personal level of individual life and health.) Dermot Diamond Director, National Centre for Sensor Research, Principal Investigator, CLARITY Centre for Sensor Web Technologies, Dublin City University "Sensor Technologies: Healthcare, Wellness and Environmental Applications takes the reader on an end-to-end journey of sensor technologies, covering the fundamentals from an engineering perspective, introducing how the data gleaned can be both processed and visualized, in addition to offering exemplar case studies in a number of application domains. It is a must-read for those studying any undergraduate course that involves sensor technologies. It also provides a thorough foundation for those involved in the research and development of applied sensor systems. I highly recommend it to any engineer who wishes to broaden their knowledge in this area!" Chris Nugent Professor of Biomedical Engineering, University of Ulster

This workbook gives nurses and nursing students the opportunity to practice and perfect their rhythm interpretation skills on more than 600 realistic ECG strips. Introductory text offers a refresher on cardiac anatomy and physiology and ECG basics, and subsequent chapters provide in-depth coverage of each type of arrhythmia, pacemakers, and 12-lead ECGs, with scores of practice strips in each chapter.

From the founder and director of the Disability Visibility Project, and the editor of the acclaimed anthology Disability Visibility, a groundbreaking memoir in essays offers a glimpse into an activist's journey to finding and cultivating community and the continued fight for disability justice. In Chinese culture, the tiger is deeply revered for its confidence, passion, ambition, and ferocity. That same fighting spirit resides in Alice Wong. Drawing on a collection of original essays, previously published work, conversations, graphics, photos, commissioned art by disabled and Asian American artists, and more, Alice uses her unique talent to share an impressionistic scrapbook of her life as an Asian American disabled activist, community organizer, media maker, and dreamer. From her love of food and pop culture to her unwavering commitment to dismantling systemic ableism, Alice shares her thoughts on creativity, access, power, care, the pandemic, mortality, and the future. As a self-described disabled oracle, Alice traces her origins, tells her story, and creates a space for disabled people to be in conversation with one another and the world. Filled with incisive wit, joy, and rage, Wong's Year of the Tiger will galvanize readers with big cat energy.

This book aims at informing on new trends, challenges and solutions, in the multidisciplinary field of biomedical engineering. It covers traditional biomedical engineering topics, as well as innovative applications such as artificial intelligence in health care, tissue engineering , neurotechnology and wearable devices. Further topics include mobile health and electroporation-based technologies, as well as new treatments in medicine. Gathering the proceedings of the 8th European Medical and Biological Engineering Conference (EMBEC 2020), held on November 29 - December 3, 2020, in Portorož, Slovenia, this book bridges fundamental and clinically-oriented research, emphasizing the role of education, translational research and commercialization of new ideas in biomedical engineering. It aims at inspiring and fostering communication and collaboration between engineers, physicists, biologists, physicians and other professionals dealing with cutting-edge themes in and advanced technologies serving the broad field of biomedical engineering.

This volume presents the proceedings of the Fifth International Conference on the Development of Biomedical Engineering in Vietnam which was held from June 16-18, 2014 in Ho Chi Minh City. The volume reflects the progress of Biomedical Engineering and discusses problems and solutions. I aims identifying new challenges, and shaping future directions for research in biomedical engineering fields including medical instrumentation, bionformatics, biomechanics, medical imaging, drug delivery therapy, regenerative medicine and entrepreneurship in medical devices.

Our sense of smell is of critical importance in our daily lives and it contributes to our personal wellbeing and safety as well as communication with others. However, it is only when disease or injury impairs its function that we appreciate the relevance of this sensory modality. During the past three decades, research of the olfactory sense has seen an ever-growing interest in this exciting field of study. This book provides the reader with an overview of the latest developments in sino-nasal and olfactory system disorders and focusses on the most important evidence-based developments in this area. This book addresses disorders, dysfunctions, diseases, and syndromes of the olfactory system ranging from molecular, cellular, and systems to cognitive and behavioral topics. Individual chapters center around recent advances in specific areas of chemosensory pathological conditions, while other chapters focus on technological developments to study the function and dysfunction of the olfactory pathways.
