Wetware: A Computer in Every Living

Read Online Wetware A Computer In Every Living

Cell (Dennis Bray, not Rudy Rucker) is a short clearly guided tour on the analogies between biology and computing. Bray walks the reader through the protein-driven algorithms that generate complex behavior even in single-celled organisms without nervous systems, biological sensory mechanisms, cellular communications, and the basics of neurons.

This fundamental physical process dominates atoms and molecules and is crucial for all aspects of living cells. It is also an essential ingredient of wetware, providing the equivalent of connections, or wires, for the cell computer. Diffusion can be seen directly under a microscope and is something every biology student discovers afresh.

Read Online Wetware A Computer In Every Living

Cell
Computer composed of organic material such as living neurons. Wetware computers composed of neurons are different than conventional computers because they are thought to be capable in a way of "thinking for themselves", because of the dynamic nature of neurons. While wetware is still largely conceptual, there has been limited success with construction and prototyping, which has acted as a proof of the concept's realistic application to computing in the future. Th

Dennis Bray in his superb book
Wetware: A Computer in Every Living
Cell has provided an extensive reading
of biological function through the lens
of computation/information processing.
Bray meticulously details how enzyme
regulation is akin to switches, their up
and down regulation, like the on/off
functions of a transistor, with chains of
enzymes acting like electrical circuits.
